GLOSSARY OF KEY MUTUAL FUND TERMS	24

Key Points to Remember

- ☑ Mutual funds are *not* guaranteed or insured by the FDIC or any other government agency—even if you buy through a bank and the fund carries the bank’s name. You can lose money investing in mutual funds.
- ☑ Past performance is not a reliable indicator of future performance so don’t be dazzled by last year’s high returns. But past performance can help you assess a fund’s volatility over time.
- ☑ All mutual funds have costs that lower your investment returns. Shop around and compare fees.

How Mutual Funds Work

WHAT THEY ARE

A mutual fund is a company that pools money from many investors and invests the money in stocks, bonds, short-term money-market instruments, other securities or assets, or some combination of these investments. The combined holdings the mutual fund owns are known as its portfolio. Each share represents an investor's proportionate ownership of the fund's holdings and the income those holdings generate.

OTHER TYPES OF INVESTMENT COMPANIES

Legally known as an "open-end company," a mutual fund is one of three basic types of investment companies. While this brochure discusses only mutual funds, you should be aware that other pooled investment vehicles exist and may offer features that you desire. The two other basic types of investment companies are:

- **Closed-end funds**—which, unlike mutual funds, sell a fixed number of shares at one time (in an initial public offering) that later trade on a secondary market; and
- **Unit Investment Trusts (UITs)**—which make a one-time public offering of only a specific, fixed number of redeemable securities called "units" and which will terminate and dissolve on a date specified at the creation of the UIT.

"Exchange-traded funds" (ETFs) are a type of investment company that aims to achieve the same return as a particular market index. They can be either open-end companies or UITs. But ETFs are not considered to be, and are not permitted to call themselves, mutual funds.

A WORD ABOUT HEDGE FUNDS AND "FUNDS OF HEDGE FUNDS"

"Hedge fund" is a general, non-legal term used to describe private, unregistered investment pools that traditionally have been limited to sophisticated, wealthy investors. Hedge funds are not mutual funds and, as such, are not subject to the numerous regulations that apply to mutual funds for the protection of investors—including regulations requiring a certain degree of liquidity, regulations requiring that mutual fund shares be redeemable at any time, regulations protecting against conflicts of interest, regulations to assure fairness in the pricing of fund shares, disclosure regulations, regulations limiting the use of leverage, and more.

"Funds of hedge funds," a relatively new type of investment product, are investment companies that invest in hedge funds. Some, but not all, register with the SEC and file semi-annual reports. They often have lower minimum investment thresholds than traditional, unregistered hedge funds and can sell their shares to a larger number of investors. Like hedge funds, funds of hedge funds are not mutual funds. Unlike open-end mutual funds, funds of hedge funds offer very limited rights of redemption. And, unlike ETFs, their shares are not typically listed on an exchange.

For more information about hedge funds, please read our publication entitled *Hedging Your Bets: A Heads Up on Hedge Funds and Funds of Hedge Funds* at www.sec.gov/answers/hedge.htm.

For more information about funds of hedge funds, please read the Financial Industry Regulatory Authority's (FINRA) Investor Alert entitled *Funds of Hedge Funds—Higher Costs and Risks for Higher Potential Returns* at www.finra.org.

CHARACTERISTICS OF FUNDS

Some of the traditional, distinguishing characteristics of mutual funds include the following:

- Investors purchase mutual fund shares from the fund itself (or through a broker for the fund) instead of from other investors on a secondary market, such as the New York Stock Exchange or Nasdaq Stock Market.
- The price that investors pay for mutual fund shares is the fund's per share net asset value (NAV) plus any shareholder fees that the fund imposes at the time of purchase (such as sales loads).

- Mutual fund shares are “redeemable,” meaning investors can sell their shares back to the fund (or to a broker acting for the fund).
- Mutual funds generally create and sell new shares to accommodate new investors. In other words, it sells its shares on a continuous basis, although some funds stop selling when, for example, they become too large.
- The investment portfolios of mutual funds typically are managed by separate entities known as “investment advisers” that are registered with the SEC.

ADVANTAGES AND DISADVANTAGES

Every investment has advantages and disadvantages. But it’s important to remember that features that matter to one investor may not be important to you. Whether any particular feature is an advantage for you will depend on your unique circumstances. For some investors, mutual funds provide an attractive investment choice because they generally offer the following features:

- **Professional Management**—Professional money managers research, select, and monitor the performance of the securities the fund purchases.
- **Diversification**—Diversification is an investing strategy that can be neatly summed up as “Don’t put all your eggs in one basket.” Spreading your investments across a wide range of companies and industry sectors can help lower your risk if a company or sector fails. Some investors find it easier to achieve diversification through ownership of mutual funds rather than through ownership of individual stocks or bonds.
- **Affordability**—Some mutual funds accommodate investors who don’t have a lot of money to invest by setting relatively low dollar amounts for initial purchases, subsequent monthly purchases, or both.
- **Liquidity**—Mutual fund investors can readily redeem their shares at the current NAV—plus any fees and charges assessed on redemption—at any time.

But mutual funds also have features that some investors might view as disadvantages, such as:

- **Costs Despite Negative Returns**—Investors must pay sales charges, annual fees, and other expenses (which we discuss in detail on page 13) regardless of how the fund performs. And, depending on the timing of their investment, investors may also have to pay taxes on any capital gains distribution they receive—even if the fund went on to perform poorly after they bought shares.
- **Lack of Control**—Investors typically cannot ascertain the exact make-up of a fund’s portfolio at any given time, nor can they directly influence which securities the fund manager buys and sells or the timing of those trades.
- **Price Uncertainty**—With an individual stock, you can obtain real-time (or close to real-time) pricing information with relative ease by checking financial websites or by calling your broker. You can also monitor how a stock’s price changes from hour to hour—or even second to second. By contrast, with a mutual fund, the price at which you purchase or redeem shares will typically depend on the fund’s NAV, which the fund might not calculate until many hours after you’ve placed your order. In general, mutual funds must calculate their NAV at least once every business day, typically after the major U.S. exchanges close.

DIFFERENT TYPES OF FUNDS (10.)

When it comes to investing in mutual funds, investors have literally thousands of choices. Before you invest in any given fund, decide whether the investment strategy and risks of the fund are a good fit for you. The first step to successful investing is figuring out your financial goals and risk tolerance—either on your own or with the help of a financial professional. Once you know what you’re saving for, when you’ll need the money, and how much risk you can tolerate, you can more easily narrow your choices.

Most mutual funds fall into one of three main categories—money market funds, bond funds (also called “fixed income” funds), and stock funds (also called “equity” funds). Each type has different features and different risks and rewards. Generally, the higher the potential return, the higher the risk of loss.

Money Market Funds

Money market funds have relatively low risks, compared to other mutual funds (and most other investments). By law, they can invest in only certain high-quality, short-term investments issued by the U.S. Government, U.S. corporations, and state and local governments. Money market funds try to keep their net asset value (NAV)—which represents the value of one share in a fund—at a stable \$1.00 per share. But the NAV may fall below \$1.00 if the fund's investments perform poorly. Investor losses have been rare, but they are possible.

Money market funds pay dividends that generally reflect short-term interest rates, and historically the returns for money market funds have been lower than for either bond or stock funds. That's why "inflation risk"—the risk that inflation will outpace and erode investment returns over time—can be a potential concern for investors in money market funds.

Bond Funds

Bond funds generally have higher risks than money market funds, largely because they typically pursue strategies aimed at producing higher yields. Unlike money market funds, the SEC's rules do not restrict bond funds to high-quality or short-term investments. Because there are many different types of bonds, bond funds can vary dramatically in their risks and rewards. Some of the risks associated with bond funds include:

Credit Risk—the possibility that companies or other issuers whose bonds are owned by the fund may fail to pay their debts (including the debt owed to holders of their bonds). Credit risk is less of a factor for bond funds that invest in insured bonds or U.S. Treasury Bonds. By contrast, those that invest in the bonds of companies with poor credit ratings generally will be subject to higher risk.

Interest Rate Risk—the risk that the market value of the bonds will go down when interest rates go up. Because of this, you can lose money in any bond fund, including those that invest only in insured bonds or U.S. Treasury Bonds. Funds that invest in longer-term bonds tend to have higher interest rate risk.
